

Knowledge is POWER

Understanding your options

We continue to offer market-leading products and delivery times on standard, upgraded, and highly accessorized drive packages.

Use our Configurator to explore all your industrial gearbox options, or reach out to your local Sumitomo Drive Technologies' Representative at us.sumitomodrive.com

Repair/Rebuild

COST

Typically the lowest cost*

*Depends on the existing condition of your unit.

Standard Product

COST

- Low Cost
- Shortest Lead Time
- New Dimensions (Not a drop-in replacement)
- Ratio Variation
- New Warranty
- Max Inventoried Product

Retro-Fit Product

COST

- Low-Mid Range Cost
- Competitive Lead Time
- Same Footprint to LSS
- Ratio Variation
- New Warranty
- Mostly Inventoried Product
- Accessorized Standard Product

Custom Paramax/ Conquest Program

COST

- Mid Range Cost
- Competitive Lead Time
- Same Critical Dimensions
- Very Small Ratio Variation
- New Warranty
- Some Inventoried Product
- Maximized Standard Parts

Custom/Reverse Engineered

COST

- 100% All Custom Parts
- Cost Equiv. To Our Risk
- Longest Lead Time
- Exact Dimensional Product
- New Warranty
- Exact Ratio/Tooth Counts
- No Inventoried Product

LUFTEX
A Sumitomo Drive Technologies Company

3 Facts About Our Large Industrial Products & Services

1 You can improve your in-stock inventories with Sumitomo Drive Technologies' improved Paramax® Series Product line.

We have added the *Paramax® Uniminer* to our already robust Paramax® Series Product line. The Paramax® Uniminer incorporates the line's well-known reliable features and a flippable universal housing--with inspection covers on top and bottom. If you require a motor adapter or lantern, then don't worry! Our rigid output coupling allows for an easy installation with no necessary alignment, reducing inventories cost.

The vertical Hansen P4's powerful design and high-load carrying capabilities make it the industry choice for mixer applications. 2

The Hansen P4 mixer standardizes many features that other suppliers usually consider upgrades--which cost more. Its standard design includes a rugged, dedicated vertical housing with a horizontal split housing. The low-speed shaft bearings are wider than equivalent torque-rated gearboxes, allowing for high mixer loads without degrading the low-speed bearing's life. Increasing bearing sizes and designs further enhance the bearing life. Integral drywell construction--designed into the housing--provides a long-life, leak-free solution for your most heavy-duty mixing applications.

3 Sumitomo Drive Technologies offers a wide range of solutions to put reliability back into your operations!

Installing any of our standard Sumitomo Drive Technologies or Hansen products with a custom transition base is the key to restoring your operation quickly and making it more efficient. We offer excellent cost-effective drop-in solutions with minimal installation effort. Suppose exact ratio, shaft dimensions, and absolute drop-in are a must-have for your operation. In that case, our design and manufacturing process delivers a cost-saving custom drop-in solution at surprisingly fast delivery schedules.
